MicroGuard® Floor Cleaning & Coating System Program Benefits

- **Can be applied to nearly all hard-surface floor types**—ceramic tile; mosaic tile; quarry tile; Vinyl Composition Tile (VCT); terrazzo (concrete & epoxy); concrete; slate; brick; aggregate; linoleum; wood; asbestos tile; etc.
- **Permanently seals the floor**—grout, surface, etc—mold, mildew, food stuffs, chemicals, urine, etc, and other contaminants cannot penetrate, compromise or contaminate the coated substrate
- **Eliminates stripping, waxing & buffing forever**—significantly reduces the investment in time, labor, equipment & supplies typically required for routine floor cleaning & maintenance—available studies indicate ongoing reductions/savings approaching 75%!
- **Highly durable & stain resistant**—lasts for many years in most environments; *easily repaired* and/or "*touched-up*" in high-traffic areas showing excessive wear & tear; can be totally recoated if/as needed; completely resistant & totally impenetrable to most chemicals, foods, drinks and oil-based products with NO effect on the surface or protected substrate
- **Chemically bonds to the treated surface**—will not peel, crack or flake
- **Highly slip resistant**—while maintaining the clean, shiny appearance desired by most facilities, home owners, etc; slip-resistance actually *improves* when the surface is wet!
- **Eliminates the need for harsh, environmentally-unsafe cleaners, chlorites and anti-microbial products**—easily cleaned via damp & dust mopping or with mild soap & clean, clear water when heavily soiled
- **Eliminates the growth of discoloring mold on surfaces and in grout areas**—thus retaining and enhancing the overall cosmetic appeal and cleanliness of the coated surface
- **Extends the life of the coated floor**—by shielding the floor surface from foot traffic while retarding oxidation, corrosion and UV-caused surface degradation
