SUBJECT: ADSIL COATING

Per your request, we have evaluated the acceptability and compatibility of applying ADSIL HVAC/R coating products to Trane units.

ADSIL coating is compatible with and approved for use on the following surfaces.

- 1. External cabinet surfaces
 - Galvanized steel
 - Steel painted with existing "Executive Beige" paint from Hunting.
 - · Steel painted with water based paint from David Frost.
 - Labels
- 2. Internal cabinet surfaces
 - Galvanized steel solid double wall liner
 - Galvanized steel perforated double wall liner
 - Fan and fan housing (except bearings)
- 3. Heating/ condensing coil surfaces

ADSIL coating is not endorsed for cooling coil surfaces at this time since coil-wetting characteristics are less than current supplier.

ADSIL coatings should not be applied to electrical components, controls, sensors, bearings, motors, drive components and some non-metallic items.

ADSIL coatings must be applied following the manufacturers recommended procedures concerning surface preparation and application. Also, all recommended safety procedures must be followed.

Regards,

PJ Sikorsky, PE
